Description

Fittings kit for Carbon King Pin Brace

Carbon Brace By Mardave Performance parts. 1.6mm Carbon.

Joins both Kingpins together making them very much stronger. Also pulls them together very slightly creating a small amount of negative camber. Will work on all makes of 12th Oval cars .

Very easy to fit - remove circlip and place over kingpin without the washer.

Not only a strength and camber aid - this also stiffens up the front end by introducing a bit of spring preload. If you find you bend kingpins or break wishbones this will reduce those breakages
